Customer Table Booking - Requirement 4

In this requirement, you need to sort the list of customers by name, amount or rating using Comparable and Comparator interfaces.

1. Create a Customer Class with the following private attributes:

Member Field Name	Type
id	Long
name	String
mobileNumber	String
birthdate	java.util.Date
averageSpendAmount	Double
totalAmount	Double
dateEnrolled	java.util.Date
rating	Double

Mark all the attributes as private, Create / Generate appropriate Getters & Setters, Add a default constructor and a parameterized constructor to take in all attributes in the given order: **Customer(Long id, String name, StringmobileNumber, java.util.Date birthdate, Double averageSpendAmount, Double totalAmount, java.util.Date dateEnrolled, Double rating)**

2. The Customer class should implement the Comparableinterface which sorts the customer list based on names.
3. Write a Comparator class namedAmountComparator implementing Comparator Interface. This comparator should sort the customers based on the averageSpendAmount.
4. Write a Comparator class namedRatingComparator implementing Comparator Interface. This comparator should sort the customers based on their rating

5. The input format consists of customer details separated by comma in the below order,
   (id, name, mobileNumber, birthdate, averageSpendAmount, totalAmount, dateEnrolled, rating)

- Note: If any other option is selected display "Invalid choice".
- Assume that name,amount spent and rating will be always unique.

6. When the “customer” object is printed, it should display the following format

Print format:
System.out.format("%-5s %-15s %-15s %-15s %-20s %-15s %-15s %s\n", "Id","Name","Mobile Number","Date of Birth","Average spent amount","Total amount","Date Enrolled","Rating");
